I am a dedicated government employee looking to enter a new career field in Full Stack Development, who has gained valuable experience working in different environments across the world. I bring a strong work ethic and personable approach to my work no matter the task. Working in high-intensity jobs with soldiers has made me highly adaptable with a will to succeed at all cost. My educational background from James Madison University as well as the knowledge I have gained from George Washington University has equipped me to work in the Web Development field. The front end development skills I have learned such as HTML, CSS, Javascript and Node have positioned me for this line of work and every day I am looking to improve upon my knowledge.

APPLICATIONS BUILT

BrewZzzz Brewery Finder

- Application to find breweries based upon a city search. Once these breweries are identified there is also an option to find hotels located in the general area. Can be used to plan a responsible weekend outing to breweries.
- Technologies used in this project were: Javascript, Ajax, Foursquare api, Google api, Openbrewery api, Weathermap api, Materialize framework, Firebase.
